

**SBEAP Technical Subcommittee
Conference Call – March 25th
11:30 am Eastern**

Attendance: Joni Canterbury – CO, Sharon Nizich – EPA, Todd Nein – OH, Terry Polan – WV, Rick Carleski – OH, Kim Grosenheider – MN, Linda Sadler – TN, Jackie Sims – IL, James Robinson – SC, Tony Pendola – NC, Renee Bashel – WI

1. Follow up from last meeting

Q: For the pressure vs temp monitoring – is it strictly either/or or is there still a priority of pressure if possible, but temp is OK?

Renee – What I heard was that the correction was going to clarify that Temp is an acceptable alternative if Pressure isn't possible. The original seemed to strongly push to pressure gauges. I will try to amend the notes to reflect actual changes when they're final.

2. National Conference sessions

A. Autobody in first session – 1.5 hour

- still do short summary for those who haven't read through
- have states share tools developed
- collect information ahead of time and focus on key sections of the rule
 - type of materials and brief description
- details of rule will come out as outreach tools discussed

B. Other Area Source Rules – 1.5 hour

- Start with discussion of state delegation and SBEAP strategy for doing outreach whether or not state is delegated, and also how we will tackle so many rules
 - can tie into the Liaison meeting discussion on same
- Discuss specific rules (set priority later): gas distribution/dispensing, IC engines, polishing/plating, 9 metal fabrication (coming soon)

Sharon – will have EPA final brochures/forms on gas dist/disp by end of week, plan to have drafts on polishing/plating ready by final rule date in June

Joni – CO has some tools on IC engine rule

Sharon will share a presentation on area source rules.

Tony – Q on Brick GACT from that presentation: What happened to the rule?

Sharon: they have found that pollutants of concern from Brick industry have actually been covered in clay/ceramics rules; brick industry isn't a large source of those pollutants, as they originally thought, so will likely be delisting Brick

3. Dry Cleaner Rule changes

Nothing out yet.

Tony Q on what other states are doing regarding movement of 3rd Gen machines.

- CO agrees with definition Warren gave – can't retrofit 3rd gen machines, so they consider them existing machines
- NC just changed policy to require retrofit if moved
- IL says that no matter what is moved, it is new
- OH similar to IL – at least for Permit To Install requirements, although not sure what requirements they would include in the permit (no longer require **BACT?** on new sources <10 TPY)

4. EPA Implementation Table

- Sharon will update table next week with more final brochures and some expected earlier than planned.
- Iron & Steel draft brochure and form will be out next week
- Q: Will there be a brochure on Dry Cleaner changes? Sharon will ask Warren; it seems like a good idea.

Q: Any news on PID vs hydrocarbon detector, and whether there is a PID available for ~\$200?

- Tony mentioned email between Scott Throwe and Warren about it, but not sure if provides final answer.
- Sharon will check on it.

5. Other

Q: Wasn't there supposed to be a training CD for the use of detectors for Dry Cleaners?

Tony thinks they were waiting for all litigation to clear up. He will check with Debra next time they speak.

Renee – did get the correct OECA contact for stripping/surface coating rule and sent our list of questions. I haven't heard back, but am hoping for something by April 9th.

Tony – Region 4 also sent questions. Teresa may know more about that.
