

**SBEAP Technical Subcommittee  
Conference Call – July 22th  
11:30 am Eastern**

**Attendance:** Joni – CO; Judy – VT; Stacey – SC; Lucy – MO; Sharon – EPA; Erin – IL; Jackie – IL; Kim G – MN; Aneka – MN; James – SC; Rebecca - OR; Renee – WI

**Minutes:**

Minutes for June 24<sup>th</sup> were approved.

1. Plating rule

- Sharon – EPA drafting initial notification, share by Thursday PM or Monday
- Erin – drafting one for IL, would like help
- Renee comment on EPA draft summary – include exact dates instead of “in 120 days”

Metal Fab

- Renee noted from EPA draft summary that expected to be published on 23<sup>rd</sup>
- Sharon will share when she gets the file
- Kim G – talking with manufacturers, seems like sheet metals have the targeted HAPs and with common sources for many manufacturers nation-wide most facilities will be affected if they grind/polish

Is there an advantage to having the one-page summaries from EPA?

- EPA’s goal was to provide more simple explanations that found in brochures commonly used
  - As you review them - do they meet that goal?
  - Let Sharon know if you think they need to be even more simple
- Judy finds them very helpful; Renee thinks they’re a good start for own fact sheets, with some room for adding more details

2. Dry Cleaner Corrections

- Renee just wanted to remind folks that the final corrections were published
- other questions?
  - Kim - room enclosures apply to any in co-residence or to majors even if not co-residential?
    - Rebecca – applies to all in co-residence.
  - Perc machines in co-residential – banned by Dec 2020, but is it true that newer ones (installed between Dec 05 and July 06?) are banned by July 2009?
    - YES, true.
  - Jackie – is anyone contacting those indicating co-residential to encourage them to change location before the ban?
    - No one on call is doing/planning that.
  - Kim – have one transfer machine in MN that doesn’t want to stop using. Any options?
    - Rebecca – they have studied alternatives, and provide information to shops about the alternatives so they can decide which is the best of the worst (so to speak – since all have environmental or health issues)
  - Erin – what about quality of results with alternatives

- Joni has worked with a lot of alternatives – seeing lots of dri-solve (is that right?) and DF2000. Find that many do work as well if you know the tricks – using spotters correctly, etc.
- Renee - Should we do something more about detector issue for states having problems with shops needing proof of sensitivity?
  - Rebecca – Tony’s presentation in PA had summary of test, and OR also has test results (side-by-side comparisons with known calibrated units/PIDs)
  - Renee – I’ll try to put Tony’s slides specific to the detector issue into a user-friendly format for the Tech Subcommittee web page.

3. Sharon’s tools shared for comment – August 8<sup>th</sup> for comments

4. Bin 6

- make sure and contact rule writers if you can provide some insights or have state contacts with experience that you can tap
- Stacey – emailed Warren

\*\* Bin 5 rules expected in August and early September for proposal, but very little impact

5. CTG on coatings

- Joni wondered if others have read the rule – she thought it well written and will likely be used for internal guidance on RACT updates

Next call – August 26<sup>th</sup>. Will try to bring on Dr. Donnalee Jones to get implementation clarification on July final rules.
