

**SBEAP Technical Subcommittee
Conference Call – August 26th
11:30 am Eastern**

Attendance: Stacey – SC; Megan – SC; James – SC; Erin – IL; Jackie – IL; Mark – IN; Rick – OH; Renee – WI; Mandy – TX; Barb – KS; Lucy – MO; Joni – CO; Joan – ID; Sharon and Donna Lee – EPA

Minutes:

1. Q&A on Plating and Metal Fab Rules

- IL modified the EPA as own, but with only initial notification questions – left management practices on as a reference
- Sharon - new EPA form also has less compliance questions; sent out email early that morning to notify everyone new forms were available
- plating initial notification date 10/29/08 – has good trade association and only one NAICS; metal fab 11/2011 – made it later because will be harder to find all affected sources
- anyone feel training on visible emissions observations will be an area needing training from our programs?
 - Method 22 references lecture training from Method 9 certification course
 - Donna Lee sent link to M22, shared with group later
- Donna Lee is developing a list of corrections for the rules and will publish a correction when list is longer, to minimize number of correction publications
 - she will share the list
 - people can help by forwarding other typos or areas where text seems out of place (i.e., mismatched deadlines for plating compliance notification and initial notification; add welding “wire” to definition of “welding rod” for measuring threshold for applicability; short-term plating timing, add “whichever is less”)

2. Follow up on National Conference

- how to notify all SBEAPs of posting of new information from Technical Subcommittee
 - audrey’s list vs SBO listserve – doesn’t hurt if those outside program knows but be sure that all programs will be notified, so could use both lists
 - do periodically so people aren’t getting multiple emails and just ignore them after a while
- invite regional air toxics contacts to conference calls to coordinate implementation tool development
 - go to Linda Miller and Susan Lancey as they coordinate with other regions
 - Region 4 is looking at doing a more universal and shorter petition form for paint rule, ask for input at call?
 - bring in on method 22 training idea for next call?

3. Others

- side issues on paint rule petition:
 - because of questions on what’s needed for petition, EPA is considering an amendment to clarify
 - have we learned any more on vintage colors that supposedly are the main ones still containing the target HAPs? Need to check in with Tony who knew something about that...
